

FILE FOLDER STORAGE BOX SYSTEM

ABSTRACT

A file folder storage box system is herein disclosed whereby a plurality of items including office supplies, craft supplies, knick-knacks, or the like may be efficiently stored in a hanging file system. The file folder storage box system generally comprises a box portion, a lid, partitions for segregating the chamber within the box portion into a plurality of compartments for enhanced organization of items to be stored. Hangers are provided for resting stably over the bars or ledges of the hanging file system while in the storage position. Various hanger configurations are also included which provide various attachment means for the hangers to the outer surface of the box portion. The system comprises a plurality of storage boxes having varying fixed partition configurations in addition to optional removable partitions so that the user may customize the space within each storage box to suit his or her tastes.
